

## 16. Country profile: Equatorial Guinea

### 1. Development profile

Equatorial Guinea is situated in West Africa with Gabon and Cameroon as its neighbouring countries. It is one of the smallest countries in Africa consisting of a small mainland area and five small inhabited islands. The country achieved independence in 1968 from Spain, being the only former Spanish colony in Sub Saharan Africa and therefore has Spanish as the official language. Ten years after Equatorial Guinea gained independence, Teodoro Obiang Nguema Mbasogo seized power in a coup and has been the president ever since, mainly by exerting absolute control over politics and oppressing any opposition. The country is nominally democratic but elections are considered rigged and flawed. Due to the discovery of oil reserves in the early 1990's, Equatorial Guinea has experienced rapid economic growth. Despite the subsequent massive increase in Government revenues and the country having the highest per capita income in Africa, the living standards of the population have not improved.<sup>1</sup> A failed coup attempt in February 2009 temporarily destabilised the country, but Government troops quickly restored order.

Human Development indicators remain poor: life expectancy is low at 50 years (less than the regional average of 54 years); infant mortality is high; about 39 percent of children are malnourished; only 44 percent of the population has access to potable water; and income disparities are constantly increasing. Poverty remains widespread and according to a 2006 poverty profile survey, 77 percent of the population lives in poverty. Education indicators are also worse than continental averages, where only 31.9 percent enrol in secondary school compared to the continental level of 44.5 percent. The enrolment rate for girls in secondary school is even lower at 23 percent, where the continental rate is 41.8 percent. The average rates in Africa for the percentage of GDP used on education and health is 2.4 percent and 4.7 percent, compared to Equatorial Guinea's levels of only 1.2 and 0.6 percent.<sup>2</sup>

In the last decade, the country has become the third largest oil exporter in Africa and oil counted for 87.1 percent of GDP in 2006 while the revenue from oil counted for 42.7 percent in 2007. Equatorial Guinea is blessed not only with oil reserves but also with natural gas deposits, especially methanol.<sup>3</sup>

Subsistence farming remains the foundation of the economy but the sector has been neglected in recent years and has lost its growth potential.<sup>4</sup>

According to Transparency International, Equatorial Guinea ranks 168 out of 180 most corrupt countries in the world<sup>5</sup> and most of the businesses in the country are owned by government officials and their family members. According to Human Rights Watch, the "dictatorship under President Obiang has used an oil boom to entrench and enrich itself further at the expense of the country's people"<sup>6</sup>. This system of nepotism breeds corruption and fraud. It has been reported that, in order to work for an oil company, a person has to produce a membership card of the ruling political party. In 2009, the Reporters Without Borders Press Freedom Index ranked Equatorial Guinea 158/175 countries and called President Obiang a "predator of press freedom."<sup>7</sup>

While the Government has written a development strategy to govern growth and development through the year 2020, major structural constraints including: increasing poverty; inadequate human capacity; and serious institutional weaknesses can be a limitation to the success of these plans.<sup>8</sup>

## 2. Vulnerability analysis

### 2.1 External shocks

According to the Economic Outlook, the main challenge Equatorial Guinea faces is its vulnerability to external shocks stemming from the country's dependency on export of oil and gas, and thereby its vulnerability to changes in the prices of oil and gas.<sup>13</sup> This comes clear from looking at the GDP growth rate which fell from 11.29 percent in 2008 to -5.44 percent in 2009 due to, among others, falling oil prices brought by the global economic crises.<sup>14</sup>

### 2.2 HIV/AIDS

Even though the HIV/AIDS prevalence rate has fallen from 3.7 percent in 2001 to 3.4 percent in 2007, it still remains high.<sup>15</sup> In 2007, an estimated 3,100 people were in need of antiretroviral therapy and only 14 percent of HIV-infected pregnant women received antiretroviral treatment, which is significantly below the Sub-Saharan average of 34 percent.<sup>16</sup>

### 2.3 Foreign aid and remittances

Several aid programmes run by the IMF and World Bank have been terminated due to corruption and mismanagement. Because of vast oil revenues, the country is no longer qualified to concessional financing, but the government has been trying to agree with the World Bank and IMF on a "shadow" fiscal management program.<sup>17</sup>

### 3. Monitoring and evaluation

There is no available information about the country’s monitoring and evaluation strategy and policies. A few National Development documents (*Horizon 2020, National Economic and Social Development Plan*) supposedly addresses the issue but it hasn’t been possible to locate these plans.

### 4. Social assistance programmes overview
